

Hindi

The United Nations recommended system was approved in 1972 (II/11) and amended in 1977 (III/12), based on a report prepared by D. N. Sharma. The tables and their corrections were published in volume II of the conference reports¹.

There is no evidence of the use of the system either in India or in international cartographic products. It was stated in 1987 that the appropriate resolution had not been implemented in India and the Hunterian system was still in use in large-scale mapping².

Hindi uses the alphasyllabic script Devanāgarī whereby each character represents a syllable rather than one sound. Vowels and diphthongs are marked in two ways: as independent characters (used syllable-initially) and in an abbreviated form, to denote vowels after consonants. The romanization table is unambiguous but the user would have to recognize many ligatures not given in the original table (only three are given). The system is mostly reversible but there may exist some ambiguities in the romanization of vowels (independent vs. abbreviated characters) and consonants (ligatures vs. character sequences).

Romanization

In the romanization system below the table of ligatures has been added.

I. Independent vowel characters

2 •ा ā ^A	4 •ी ī	6 •ू ū ^B		9 •ै ai	11 •ौ au

Notes

1. It is recommended that the vowel अ (*a*) should always be romanized except when it ends a name. If a name ends with a consonant, the consonant should carry a sub-macron. Such cases, however, will be very rare. For example, कानपुर Kānapur (not Kānapura), जगत् Jagaṭ.
2. If each letter of a digraph or any two parts of a trigraph has a distinct independent sound then it should be indicated by a hyphen, thus *d-h*.

Other systems of romanization

The **Hunterian system** is the actually used national system of romanization in India.

UN	Hunterian						
ā	= ā, a ^A	ṁ	= n, m	sh	= s, sh	v	= w, v ^B
ḍ	= d	ṅ	= ng	ṣh	= sh		
ḍh	= dh	ṇ	= n	ṭ	= t		
ī	= ī, i ^A	ñ	= ny	ṭh	= th		

^A Word-finally.

^B Exceptionally, e.g. before *i*.

The transliteration standard for Indian languages **ISO 15919: 2001** provides different transliteration equivalents to the characters of the Indian languages. These are:

UN	ISO						
ā	= ē	ḥ	= ḥ, ḵ ^B	o	= ō, o ^A	ṭ	= ṭ ^D
ā	= ǒ	ḷ	= y ^C	ō	= o	y	= y ^{CF}
ch	= c	ḳh	= ḳh	ṛ	= ṛ	ȳ	= y ^F
chh	= ch	ḷ̣	= ḷ̣	ṛ̣	= ṛ̣		
e	= ē, e ^A	ḷ̣̣	= ḷ̣̣	ṛ̣̣	= ṛ̣̣		
ě	= e	ḷ̣̣̣	= ḷ̣̣̣ ^B	sh	= ś		
ḡ	= ḡ	ṃ̇	= ṃ̇, ~, ṁ ^E	ṣh	= ṣ		

^A Non-uniform vowels option: if the only scripts in view are without short *e*, *o*, then long *e*, *o* may be transliterated *e*, *o*, respectively.

^B Used in Tamil.

^C Used in Bengali.

^D Used in Malayalam.

^E Used in Telugu.

^F Used in Oriya.
